DETAILED ACTION

Claim Objection

1. Claim 10 is objected to because of the following informalities: it is suggested to substitute "the" before the word phrase "DSL standard" by -- a --. Appropriate correction is required.

Abstract

2. Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details. The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

It is suggested not to use the word phrase "according to the invention" in the abstract as noted in the abstract, line 7.

Allowable Subject Matter

Claims 1 – 11 are allowable.

Art Unit: 2819

The following is an examiner's statement of reasons for allowance: in combination with other limitations of the claims the prior arts made of record fail to suggest an apparatus and method for the interpolation of input values of an input signal that comprise a means for scaling interpolation values of an interpolation progression in dependence on a difference between a first and subsequent second input value and means for producing successive output values in each case of addition of the first input to a scaled interpolation value.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
4. Kamada (US Patent Number 5,202,904) discloses a pulse stuffing apparatus and method.
5. Calarco et al. (US Patent Number 5,237,432) discloses an image scaling apparatus.
6. Oikawa (US patent Number 5,638,411) discloses stuff bit synchronization system.
7. Wakasugi (US patent Number 6,157,937) discloses a high-speed interpolation circuit with small circuit scale).
8. Gotanda et al. (US Application No. 10/028,545) discloses an interpolation apparatus and video signal processing apparatus including the same.
9. This application is in condition for allowance except for the formal matters mentioned above.

Art Unit: 2819

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
